

GEOWORLD ENGINEERING GROUP, INC.

Diversified Experience to Meet Your Needs

Because the nature and complexity of most coastal problems vary widely with location, the proper solution of any specific problem requires a systematic and thorough study. With over **250,000 linear feet of marina slips, thousands of feet of bulkheads and seawalls, USACE floodwall structures, and countless shoreline protection solutions** to its credit, the highly experienced GeoWorld team understands these problems and considers all advantageous and detrimental physical and environmental effects, while comparing the overall cost and benefits to the project. Following is a partial Waterfront Project list.

- Long Wharf Park Marina & Canal Dock Park, City of New Haven, Connecticut
